Thank you for the opportunity to review the draft HC. ATSDR's conclusions are in line with EPA's analysis of the data. While I agree that it is important to have a specific sampling strategy moving forward, the ATSDR Health Consultations are, and should, remain more general in nature. EPA can discuss internally and with ATSDR to develop a detailed vapor intrusion sampling plan that fits into our site strategy moving forward.

Elena/Jill:

Potential Source #3 is a former dry cleaner.

About re-sampling or monitoring... The HC recommendation is to

broad.... the 1st HC stressed out the importance of sampling during rainy seasons. Can we re-sample during the the next rainy season - usually July thru Nov? and when do we stop re-sampling?

Jeff

We need clarification on one sample collected In Feb. the apartment behind the former Serrano Dry Cleaners. It seems that one of the Figures shows a SS sample collected in the apt., but the Excel spreadsheet has no sample results associated to that SS sample.

Could you please find out if we collected a SS in that apartment? and if we did, find out what happened with the SS results at that location?

thanks

Denise
